

Crossing TW/TW 50-90° KUDISC

Item number B1303-01

Dimensions

A: 740 mm

Material and weight

Gewicht: 10.500 kg

Material: Cu

Applicable standards

EN50119

Function

As crossing for tramways the KUDISC allows for a silent crossing of the pantograph. The contact wire is suspended at the crossing between the crossing divider and the moving sliding rolls, i.e. the KUDISC does not act as fixed point and covers the different requirements of the contact

wire systems of fixed and retightened design. Due to the large support surface on which the pantograph is running, the material wear and tear is kept low during the crossings.

Specification

The KUDISC can be suspended by the two suspension lugs for use in fixed or retightened systems. Due to the low own weight, the KUDISC also can be assembled without suspension. For further recommendations see our assembly instructions. The suspension must be ordered separately to the KUDISC.
